Data Pipeline Prioritisation for Snowflake

Purpose

- This sheet will be used to stack rank data pipelines to allocate Snowflake resources in 2026

Instructions

- Add the data pipeline name and use drop downs to select the # of dependencies, criticality and Snowflake cost
- **# of Dependencies** - How many other Supergroups are known to depend on this data pipeline? See ALRs
- **Is Critical** - See here to determine whether your pipeline is considered "critical" (this definition will evolve, but for now helpful for prioritisation)
- **Annualised Snowflake Cost** - Use this Mode dashboard to calculate approximate annualised cost (incl. compute and storage)

# of Dependencies	# of Supergroups	Value
Very low	No dependencies	1
Low	Up to 1	2
Medium	2 to 3	3
High	3 to 5	4
Very High	5 or more	5

Is Critical	Value
❌ No	1
✅ Yes	2

Snowflake Cost	Cost Bins	Value
Very low	0 - 500	1
Low	500 - 1,000	2
Medium	1,000 - 10,000	3
High	10,000 - 100,000	4
Very High	> 100,000	5
