Date: Jan 28, 2026
Status: In review
Due: Dec 17, 2025

Stakeholders

Review scope	Status	Name *(reviewer's guide)*
AEWG	Conditionally L...	Josh Devlin
	LGTM	Rob Scriva
Data Domain Sponsor	Review now	Moe Kiss
	LGTM	Seth Bata
	Conditionally L...	Tom Schlosser

Product Domain Overview

This HLDD lists domain-aligned data services and Semantic Layer Subject Area that will be created for Product Experience Data Domain as part of the warehouse data architecture that enables AI-Ready Data, a company goal for 2026.

Product Experience Domain encompasses data related to core business entities including users, brands, features, products, and user actions. It tracks changes to these entities and the evolving relationships between them over time, focusing on user interactions with Canva's products and features.

This includes Editor and Generative AI features, Multi-User capabilities like Learning, admin controls, and brand systems that maintain secure collaboration and on-brand designs across brands, teams, and organisations. It sets the analytics foundation for:

- **Product Adoption & Activity** tracks user behaviour across Product Experience products and features, including:
  - **Adoption**: Feature discovery and first-time usage
  - **Activity**: Breadth and frequency of actions/interactions
- **Engagement**: Depth, quality and stickiness of usage (engagement tiers, cross-product patterns, retention).
- **User Retention & Cohort Analysis** extends engagement tracking by measuring retention of users engaging with Product Experience features and products over time. Covers retention curves, cohort performance, and retention behaviour patterns for Design Experience, GenAI, Teams & Education features.
- **Product / Feature Cost & Operations** evaluates feature-level cost estimates and operational efficiency, particularly for AI and compute-intensive features. Helps understand resource usage and cost impact of features such as generative AI capabilities. An evolving capability that sources from cloud finops data and telemetry.
- ~~**Performance & Reliability** tracks technical quality indicators including page load times, error and crash rates, and performance degradation. Used to monitor system reliability and identify areas needing improvement.~~

Product Experience Data Services:

To provide these capabilities, the Product Experience domain is structured into two Data Services and a Semantic Subject Area:

- **Conformed Layer Data Service** - Provides reusable event-level facts for Product Experience feature interactions and product entity dimensions and facts.
- **Metric Layer Data Service -** Reporting oriented metric layer delivering dimensional models that answer product health, state and user engagement questions for Product, Growth, and Data Science teams.
- **Semantic Layer -** A logical layer sits on top of metrics layer, provides a governed and AI-ready interface to end users via conversational AI and BI and Analytics tools

Ownership Model :

Area	Responsibility Scope	Owner(s)
Domain Data Sponsor	Overall domain ownership	SG Data Leads: Moe Kiss (Product Org & DE) Seth Bata (GenAI) Tom Schlosser (T&E)
Product Experience Conformed Layer	Design and maintenance of data models, including orchestration, infrastructure, and cross-domain coordination.	Product Org AEs: Owen Yan (DE) Jeff King (GenAI) Wilson Kong (T&E) Soumya Prabha (T&E) Karan Pandit (DE)
Product Experience Metrics Layer	Design and maintenance of data models, including orchestration, infrastructure, and cross-domain coordination.	Product Org AEs: Owen Yan Jeff King Wilson Kong Soumya Prabha Karan Pandit
	Metric definition and stakeholder coordination	Product Org Data Leads: Tracy Cai (DE - Video & Productivity) Rodger Gu (DE - Editing) Kasia Petrus (DE - EU) Kieran O'Shea (GenAI) Jeff Wang (GenAI - Generative Experience) Jimmy Tran (T&E - Admin Experience) Max Cordony (T&E - Brand Experience) Rye Johnstone (T&E - Learning Experience) Jazmin Ozsvar (T&E - Business Workflows)
Product Experience Semantic layer	Design and maintenance of the semantic views	Product Org AEs:

		Owen Yan Jeff King Wilson Kong Soumya Prabha Karan Pandit Product Org Data Leads: Tracy Cai Rodger Gu Kasia Petrus Kieran O'Shea Jeff Wang Jimmy Tran Max Cordony

Scope:

The scope for phase-1 of Product Experience Data Services include the build of the Conformed and Metric Layer data models and Semantic models for our Key Metrics pipelines:

T&E Key Metrics Pipelines in Scope

- Monthly active brand user daily snapshot - User base for T&E MXU metrics
- Canva Grow
- Brand System North Star Metric
- Monthly Active Canva for Education, Campus or District User (MACCDU)
- Monthly Active Learning User (MALU)
- Managed Users (may hand over to Growth)

Below T&E metrics are tentative for phase-1 as the definitions are still evolving

- Business Workflows North Star Metric
- Net Seat Expansion

This includes building Product Experience owned dimensions alongside frontend and backend event models. A detailed list of Conformed and Metric Layer models is in progress and will be confirmed before the commencement of the build phase.

Design Experience and **Gen AI** entities and metrics in scope for Phase 1 are detailed in the Conformed Layer Entity Catalogue and under Metric layer dimensions and metrics tables.

Out of Scope for Phase 1: Models not directly supporting the Key Metrics pipelines, including student-teacher ratio reports, funnel analysis, cross-product interactions, and flexible reporting capabilities. Conformed and metric layer models may cover some of these capabilities, but building data products for anything outside of key metrics pipelines will not be prioritised for Phase 1.

Note:

Though we are migrating entity and metric pipelines from the current transform namespace over to Data Services Architecture, this exercise is not intended to be a lift and shift of these models. Rather, this is an opportunity to re-imagine our entities, models and data flows.

This includes:

- Standardising:
  - The **definition of PE entities**
  - **Data models** and
  - **Data pipelines**
- Design and develop **reusable capabilities** to generate these standardised models and transformations.

Product Experience Conformed Layer

The Product Experience Conformed layer provides reusable event-level fact and entity models for Product Experience analytics.

- **Consumes** from first party sources owned by Product Experience and Foundational Conformed Layer.
- **Abstracts** event filtering rules, interaction validity, feature mapping, source system complexity and data quality logic from downstream reporting.
- **Models** product, feature and user dimensions, relations and state models, product usage, feature interactions, editor sessions, design lifecycle, and performance and reliability event facts.
- **Publishes:**
  - **Interaction facts:** Feature interaction events (interaction facts per Feature-action or Feature-Surface-Action)
  - **Product entities:** Product, Feature, Surface, Action and other user and brand entities and relations that define product structure and user interaction patterns.

Strategic Alignment: Supports evolving product definitions (Evolving "Visual Suite" Analytics (Nov25)) where former ingredients (Charts, Photo Editing, Mockups) are now first-class products with equal analytical treatment.

Entity Catalog and Public Data Products - Phase-1

Entity / Entity Group	Purpose	Public interfaces/models (Optional)
User Feature Interactions	Capture how users interact with product, features, etc.. Includes both doctype-based products (with separate active events) and interaction-based products (where interactions also serve as active events), teams and education features and AI features	Event level fact models
Editor Sessions	Track editor session lifecycle, and behaviour	Editor session fact model
Design Lifecycle	Track design creation, editing, sharing, publishing, and deletion events	
~~**Editing Performance and reliability**~~	~~page load metrics, crashes, and reliability tracking~~	
AI Platform	Understand the backend usage of the platform and services	
Evaluations	Understand the evaluation and performance of models in the Canva context	
Edu user role	Role semantics used in Education contexts (e.g., teacher, student)	fact_edu_user_role_history
Education feature entities, relations, hierarchies and usage	Classroom Interaction events Teacher verification Education roster association	Fact models tracking changes to these entities

Brand System component entities	Education group (class) brand kit, brand templates, brand assist, etc.	Dimension tables, Fact models tracking changes to brandkit ingredients and brand system components
Admin experience features and actions including backend events	Team invites and accepts including school joining requests Brand hierarchies Managed users and brands	

- Conformed Layer Orchestration
  - **Event-Based Triggers**
    - Triggered upon completion of **Foundation Conformed** layer and **Source** namespaces processing
    - Runs **daily**
      - *Expecting a model-level orchestration to be implemented in phase 2 so we can be selective on what downstream models need to be run*

Product Experience Metrics Layer

Product Experience Metrics Layer delivers star schema models organised by business question area.

- **Consumes from** Product Experience Conformed Layer, Foundational Conformed Layer, and cross-domain Conformed layers as needed for reporting enrichment.
- Uses dimensional modeling best practices with denormalised fact tables and conformed dimensions
- Includes pre-aggregated summary tables at higher and lower levels for standard metrics and flexible reporting. Example: Daily user activity at product-feature-action and product-feature-platform-surface-doctype grain where query optimisation is required
- Models exposed through Product Experience Semantic Subject Area for consumption via conversational AI, BI and Analytics tools

Metrics / Dimensions in Scope for phase-1

Grouping	Metric / Dimension	Existing Models (Optional)
Product Adoption	Product / feature active users ~~(DAU/MAU)~~, new users, user growth by product, platform-specific adoption and interactions	
Activity and Engagement	Feature usage engagement tier metrics, engagement depth by segments, cross product usage patterns	
Product / Feature User Retention and Cohort Analysis	Retention curves, cohort retention rates, platform-segmented retention, feature retention specific to Design Experience, Generative AI and Teams & Education products and features	
Product / Feature Cost and Operations	Estimated feature costs, resource utilization by feature	
Performance and Reliability	Page load times, crash rates, error rates, performance degradation, offline capabilities	
Customer Satisfaction Score (CSAT)

DXD Phase 1 Plan (Dev)

Proposed Models to be migrated (exclude Editor specific models)

Total number of models: 145 (82 insert / incremental) - current in transform and not exact same models in new data services. Some refactoring could be required.

Model Name	Model Owners	Materialisation	DXD Phase 1 Leaf Nodes	Num Leaf Nodes	Should Migrate	Note	Is Private	Is Conformed	Is Metrics
